

Specialist technical services

Building management systems and controls

MITIE

Building Management Systems (BMS) are a great technology. They can make your sites more efficient, bring your costs down, and reduce your energy consumption. But only if they're working properly. That's what we can do.

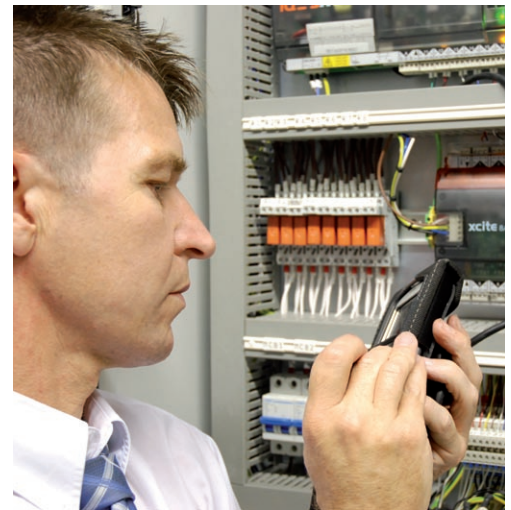

Our BMS experts understand the best way to apply systems like this, and how they can contribute to a more sustainable approach to building management. They have the technology to ensure you're getting the proper return on your investment, and will work alongside our energy management team to generate ongoing improvements in plant efficiency and carbon savings.

Our Controls teams offer

- A comprehensive service covering consultancy, design, project management, engineering, installation, and essential support services.
- Better control of your energy use, which will cut the amount of energy you consume and pay for. As Jon Jones, the Facilities Manager of the Sony Pencoed Technology Park, says, "Six months on, we are seeing monthly reductions [in energy use] in excess of 30% compared to the same month in previous year, achieving a staggering 50% reduction in air handling running costs. We are anticipating accumulated total energy savings of £1 million in the next three years."
- Experience with all building types and control systems. Our clients include Sony, Southampton University, and Telereal Trillium
- A nationwide controls capability and 24 hour controls response centre, with remote dial-in and technical assistance
- Proven expertise, and ongoing partnerships with leading control manufacturers. We were also a finalist in the Energy Management Category of the 2008 Building Controls Industry Awards.
- Independent advice, which ensures you get the right solution for your site. As Mark Turner at Southampton University says, "MITIE is not tied to one particular BMS manufacturer and is able to provide impartial advice plus fast and efficient service across our portfolio."
