

Mechanical and electrical maintenance

MITIE

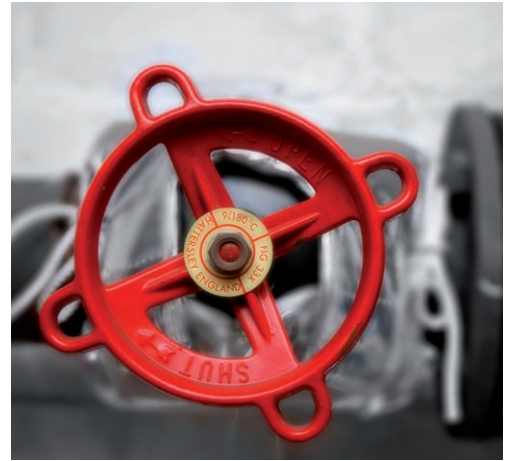

Every organisation needs a safe and healthy working environment, that meets all the latest regulations. The concept is straightforward enough, but delivering it can be extremely complex.

That's our job. We can manage every aspect of your building, from essential everyday services like water hygiene to complex technical areas like plant and boiler maintenance, HVAC applications, building controls technology, and electrical services.

We have over 3,000 multi-skilled engineers working for hundreds of clients, 24 hours a day, 365 days a year. Our 24/7 site-monitoring centre uses specially developed software to monitor remote Building Management Systems (BMS), so we often know of faults before you do, and can get working on them fast.

And we can provide M&E services in any way that suits you, from a small adaptable service contract, to a total integrated hard FM solution. Everything from initial audit to full project design, implementation and maintenance, and all with full service level guarantees and the option of capital funding arrangements on specific projects. You choose – we deliver.

We also use high-tech planned preventative maintenance to make sure your contract runs efficiently, because preventing a problem is almost always cheaper than fixing one.

“ Preventing a problem is almost always cheaper than fixing one. ”
